deployed in field on
front-end loader
used to remove
trees in the grove.

"GeoAg seems to be more aggressive about new technology and they are responsive to our concerns."

Agribusiness Manager and GeoAg Solutions Customer

Whether your needs require special customization to our existing products and services or developing original applications we can meet your needs. Our combined experience in the agricultural industry enables us to better communicate and understand your requests.

Because we understand your business, we can eliminate costly changes and modifications during the development process due to miscommunications or the uniqueness' of agriculture operations. This means that you get your solution when you need it.

"When you invest in our products, you also receive the assurance that we can create additional value on that investment beyond it's primary use."

Neal Horrom, Manager of GeoAg Solutions

GeoAg Solutions' development team ensures that you can increase the value of your investment in our products. When one of their customers came to them with an idea for recording tree locations in their groves, the GeoAg Solutions development team took up the challenge and TreeLogger™ was born.

TreeLogger™ is a simple to use application for recording tree point locations with GPS. It is designed to work on GEOMAX rugged computers so that CitriTrack customers don't have to invest in more equipment. Users can easily setup their own list of attributes to describe the point they are marking. Data can be wireless transmitted using your existing CitriTrack Network account and easily accessed over the Internet.

Left to Right: Don O'Neill, President of Linx Systems; Neal Horrom, Manager of GeoAg Solutions; Andrew O'Neill, Vice President of Linx Systems; and David Summers, GeoAg Solutions Sales Representative.

Since it's inception, TreeLogger has undergone several changes and modifications due to different customer requests.

TreeLogger is now available for your business. If it does not exactly fit your use or you require a different means of data collection, put the GeoAg Solutions development team to work for you.

If you think it can be done and you need it done, then get it done with GeoAg Solutions.
