

# harvestwatch™

providing the freedom to extend your reach

Today's Harvesting Manager often has to be in different places at the same time. When you can't be there, HarvestWatch can provide the most current information for making those tough, on the spot decisions. From inside your truck or at your desk, the CitriTrack™ Network keeps you linked with your crews in the field. View where crews are harvesting, how many pickers are working and their average hourly wage. See where trailers are located and monitor their status. HarvestWatch has a unique technology that even tracks the oldest dump loaded onto a trailer giving you an accurate "age" for each load. HarvestWatch is the best way to maintain fruit traceability and ensure a fresh finished product every time.

HarvestWatch provides  
a vital link in the  
ability to accurately  
trace fruit.

- Easy to create trip ticket reports
- Know what is left in the field at the end of the day without having to "make the rounds"
- Access to grove maps where your crews are working
- Easy access to information on past loads
- Utilize real-time information to negotiate pick prices
- Tracks "age" of oldest fruit on load

HarvestWatch with  
HarvestMap™ and  
HarvestPay™  
systems provide a  
complete solution.

As operators record information in the field, you receive what you need as a manager through HarvestWatch. Trailer locations are visible on maps of the groves and labeled by which crews are loading them and how full they are. In the load management section, you can view and change the status of each load. It will display whether your trailer is loading, loaded, in route, delivered or empty. Trip ticket information is also accessible. Check on the current productivity or potential of individual crews by going to the crew section and viewing the number of active workers for each day and the average hourly wage for that crew. As trailers are being loaded, you can complete the trip ticket information and send it back to the field to be printed when the load is finished.

**"We used to record everything on paper. Now we can pull information up on the computer and see where loads and trailers are at."**

**Dispatcher and HarvestWatch user**
